(54) ORGANIC ELECTROLUMINESCENT
ELEMENT

nitrogen-containing heterocycle.

COPYRIGHT: (C)2001,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an organic electroluminescent element with high brightness and excellent durability, enabled to illuminate with high efficiency.

SOLUTION: This organic electroluminescent element has an organic luminous layer, or an organic compound layer including the organic luminous layer, formed between a pair of electrodes on a substrate, and at least either the organic luminous layer or the organic compound layer contains a compound with a condensed heterocyclic skeleton with nitrogen atom in the condensed part, shown by formula 1 more specifically, for example, formula NT-7, and an ortho-metallized complex like iridium complex. In formula 1, X represents carbon or nitrogen, Z1, Z2 represent independently a group of atoms capable of forming a
